# NICKELCHAIN: COMMODITY BACKED NICKEL TOKENIZATION

Nickel Blockchain is a pioneering Real World Asset (RWA) platform designed to tokenize and democratize access to nickel resources. Anchored in the rich nickel deposits of Sulawesi, Indonesia, and backed exclusively by the physical assets of RSB Investments, the platform introduces the native token NCK, pegged 1:1 to the global price of nickel. This innovative approach bridges traditional commodity markets with blockchain technology, enabling secure, transparent, and efficient trading, investment, and utilization of nickel-backed assets.

# NICKEL BLOCKCHAIN KEY FEATURES

## ASSET TOKENIZATION

RSB Investments' nickel reserves, mining output, and infrastructure are tokenized as non-fungible tokens (NFTs) for unique assets or fungible tokens for standardized ore batches.

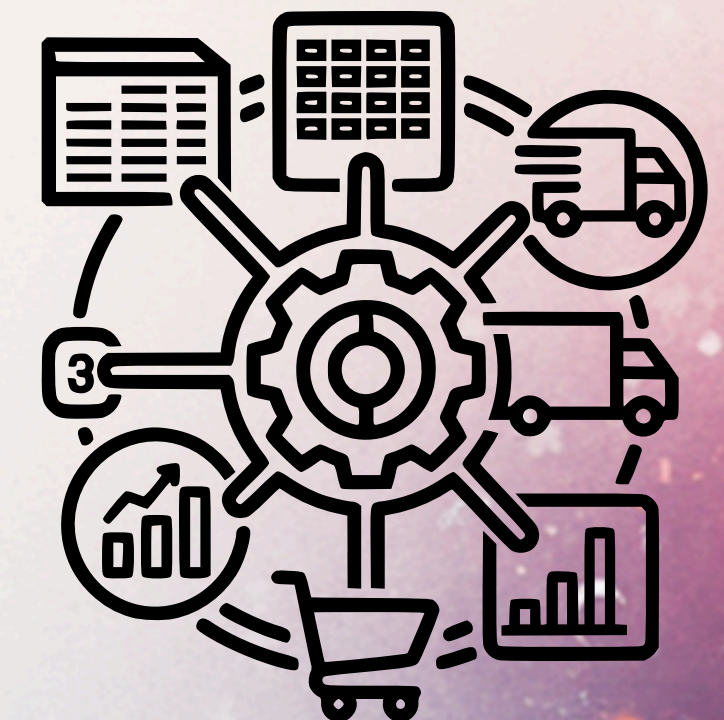

## SUSTAINABLE FOCUS

Blockchain incentives reward eco-friendly mining practices, with carbon credits tokenized alongside nickel.

## PRICE PEG MECHANISM

NCK is soft-pegged to the London Metal Exchange (LME) nickel price via Chainlink oracles, updated in real-time. Collateralization ensures over-collateralization (e.g., 150% backing) with audited physical nickel stored in secure Sulawesi facilities.

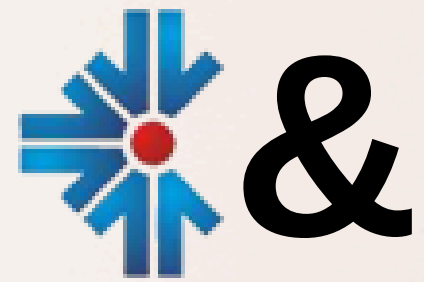

## SUPPLY CHAIN TRACEABILITY

Smart contracts record every stage from extraction to delivery, verifiable on-chain.
